Skills

Languages: Java, JavaScript, Python

Cloud & DevOps: AWS, Docker, Git, Github, Linux

Frameworks & Libraries: React.js, Node.js, Express.js, MySQL, TailwindCSS

Other Tools: Supabase, Cloudflare R2, OAuth 2.0, Hugging Face Models

Education

Pimpri Chinchwad College of Engineering and Research

B.E. in Computer Engineering

2023–present

CGPA: 8.35

Maharashtra State Board

Higher Secondary Education (HSC)

2021–2023

Score: 81.83% — MHT-CET: 98.31

Experience

Full Stack Web Developer Intern – UD Studios

Dec 2025 – Feb 2026

- Built a Room Booking application featuring Role-Based Access Control (RBAC) to securely manage user registration, authentication, and role privileges.
 - Engineered backend transaction logic to handle concurrent reservation requests, successfully mitigating double-booking race conditions and preserving data consistency.
 - Leveraged Supabase for secure database management and Cloudflare R2 for hosting project images.
 - Developed three role-based dashboards (Guest, Host, Admin) utilizing interactive analytics to track platform occupancy, bookings, and revenue metrics.
-

Projects

Finarrator – AI Powered Financial Assistant

[\[GitHub\]](#)

Tech Stack: React.js, Node.js, Express.js, Firebase, OAuth 2.0, Fi's MCP Server, Hugging Face Models

- Built an financial assistant using LLMs, generating real-time financial insights across 5+ financial scenarios and delivering personalized responses.
- Designed and implemented a financial performance dashboard, RAG-based chatbot, improving data accuracy and response relevance.
- Engineered structured prompts that combine user intent, financial data, and contextual information to generate accurate and reliable LLM responses.

Report.ai - NLP Powered Feedback Analytics Platform

[\[GitHub\]](#)

Tech Stack: React.js, Django, MySQL, Hugging Face Models

- Built a feedback analytics platform using NLP pipelines to process evaluation records, enabling efficient performance review analysis.
 - Designed data-driven and adaptive feedback forms that improved user engagement and response rates.
 - Implemented keyword and trend detection modules to analyze thousands of feedback responses, reducing manual analysis effort.
-

Leadership

Web Team Lead – ACMxPCCOER

2025 – Present

- Enhanced and maintained a responsive, user-friendly website, ensuring seamless UI across devices.
 - Led a 5-member frontend team, delivering milestones on schedule.
-

Achievements

- Top 10 - Finance Track, Google Agentic AI Hackathon 2025 ,Winner - Two College-level Project Competitions
- Solved 200+ Data Structures and Algorithms problems on LeetCode.
- Open-Source Contributor: Contributed to FitMart by implementing endpoint-specific rate limiting for a Gemini API integration to improve security and prevent API abuse.
